Palms shows off revamped guest rooms as part of \$620M overhaul

By [Mick Akers \(contact\)](#)

Wednesday, July 11, 2018 - 2 a.m.

676

The \$620 million overhaul of the Palms is coming into focus with the unveiling of its revamped hotel rooms, including a \$40,000 per night villa that accommodates 52 guests.

Parent company Station Casinos' project includes the transformation of the near-Strip property's Fantasy Tower guest rooms, Sky Villas, and the new Executive Suites.

"As we introduce our completely renovated new-room product offerings this summer, we are thrilled to debut our newly revamped look and offer guests elevated accommodations during their experience at Palms," said Jon Gray, general manager at the Palms. "We teamed up with the best interior design partners possible, Avenue Interior Design and Bentel & Bentel Architects, to meticulously create the most sophisticated and one-of-a-kind room offering out there for all types of guests."

The Sky Villas and their renowned infinity pools overlooking the Las Vegas Strip are the crown jewels of the property's rooms. All guests staying in Sky Villas have private round-trip ground transportation, in-suite amenities including one-touch automation controls for the room, Dyson hair dryers, a redwood cedar sauna, massage room, and fitness room complete with a Peloton indoor bicycle and a Woodway Treadmill.

The two-story Sky Villa located on the 32nd floor has reservations starting at \$40,000 a night.

The 8,500-square-foot, two-story, two-bedroom villa (with optional salon suite connector) can fit up to 52 guests.

Sleek design mixed with modern comforts across two floors, the villa features tall ceilings, a 17-seat bar with two lounge and media areas. The dining area seats eight guests and a gaming area features a pool and foosball tables.

The large bedrooms are outfitted with California King beds, large closets and bathrooms with walk-in steam showers for two and deep soaking tubs with hydrotherapy bubble massage air jets, Toto Neorest automatic commodes.

The two one-story Sky Villas on floors 29 and 31 both start at \$25,000 per night, but offer different amenities.

The 29th floor Sky Villa encompasses 5,000 square feet with a spacious layout. The 31st floor one-story Sky Villa is 5,000 square feet, with reservations starting at \$25,000.

Four one-story Sky Villas, and two two-story Sky Villas, each with their own aesthetic, sit high atop the Fantasy Tower's top floors. Two of the six villas — 29 and 31 — are available for stay dates now, while the other four will be available for stay dates through this year.

The updated penthouses, designed by Avenue Interior, start at \$1,500 per night.

The one-bedroom penthouses range from 1,400-1,800 square feet and feature a grand black marble entrance, sepia-toned wood paneling and custom-designed carpets.

The penthouse is equipped with multiple large-screen televisions and fully functional bars amid curated contemporary artwork and unique furnishings in jewel tones and rich woods providing a modern contrast.

The 1,900-square-foot, two-bedroom penthouse goes for \$2,000 a night and features a masculine theme with a mixed-marble entry, dark wood paneling and views of Las Vegas through floor-to-ceiling windows.

The Salon and Grand Suites start at \$199 a night and offer a full wet bar with custom cabinetry, marble countertops and a full-height bronze mirror accent wall.

The suites include sofa beds for added guest accommodations, and renovated bathrooms feature a large walk-in shower and modern soaking tub, both of Zebrino marble.

Select suites include bathrooms with floor-to-ceiling windows as well.

Palms is also introducing new 840-square-foot executive suites. Starting at \$199 a night, the rooms are designed to cater to the needs of business travelers.

They offer multiple 65-inch televisions for presentations, a large living room with meeting space and an in-room conference table.

The renovated resort rooms start at \$139 a night and feature white oak cabinetry, custom-designed furniture and polished chrome hardware as well as updated bathrooms with a walk-in shower made of striped Zebrino marble and large backlit vanities.

Palms will also unveil renovated one-of-a-kind Themed Suites, formerly known as the Fantasy Suites, later this year.

The room remodels are now available for guest booking at fromdusttogold.palms.com. Sky Villas guests are encouraged to contact a luxury sales representative at 702-942-1222 or luxurysales@stationcasinos.com

Protecting your online 'crop' of information

BY JENNIFER A. BROWN
STAFF WRITER AND INVESTIGATION
EDITOR, THE VEGAS INC.

The dawn of the internet is not just a distant memory, it's a recent one. In the past few years, the digital landscape has changed so rapidly that it's hard to imagine a time when the only way to communicate was through a telephone or a letter. Today, we can connect with anyone, anywhere, at any time. But with this convenience comes a new set of challenges. Our online lives are filled with personal information, from our names and addresses to our credit card numbers and social media profiles. This information is a treasure trove for cybercriminals, and it's up to us to protect it.

One of the most common ways that our information is stolen is through phishing attacks. These are emails or text messages that appear to come from a legitimate source, such as a bank or a government agency. They often contain links to fake websites that ask for your personal information. If you click on the link and enter your information, the cybercriminals can steal it. To protect yourself, always check the sender's email address and avoid clicking on links from unknown sources. Also, be wary of any requests for personal information, especially if they come from someone you don't know.

Another common way that our information is stolen is through data breaches. These are incidents in which a large amount of sensitive information is leaked or stolen. This can happen to any organization, from a small business to a large corporation. If your information is part of a data breach, it's important to act quickly. Change your passwords, notify the relevant authorities, and monitor your credit reports for any suspicious activity.

Finally, it's important to be aware of the information you share online. Many of us are quick to share our thoughts and feelings on social media, but we often don't realize how much information we're giving away. This information can be used to identify you and your location, and it can be sold to third parties. To protect your privacy, think twice before you post anything online. Avoid sharing too much personal information, and use privacy settings to control who can see your posts.

As a result, many people, including our own, are taking steps to protect their information. This includes using strong passwords, enabling two-factor authentication, and being cautious about what they share online. It's also important to stay up-to-date on the latest security threats and to use reputable security software. By taking these steps, we can help protect our online information and keep our digital lives safe.

At the end of the day, protecting our online information is a responsibility we all share. It's not just about protecting ourselves, it's about protecting the trust that we've built in the digital world. Let's work together to keep our online lives secure and our information safe.

properly locked up, and the trouble is when that data is not protected when you need it. A disaster recovery plan can help bridge that gap. It's a plan that outlines how you will recover your data in the event of a disaster. This includes backing up your data, testing your recovery process, and having a plan for how you will restore your data. A disaster recovery plan is a critical part of any business's IT strategy, and it's one that every business should have.

Another important part of protecting your online information is to be aware of the risks. There are many different types of threats, from malware and viruses to phishing and data breaches. It's important to understand the risks and to take steps to protect yourself. This includes using security software, keeping your software up-to-date, and being cautious about what you click on and what you share online.

Finally, it's important to remember that protecting your online information is an ongoing process. The digital landscape is constantly changing, and new threats are always emerging. It's important to stay up-to-date on the latest security threats and to be prepared to adapt your protection strategy as needed. By taking these steps, you can help protect your online information and keep your digital life safe.
